

Enjoy success with Miyabi solar lights

Buyers in four continents already have

If you're from North America, Europe, Australia or Asia, you may have seen our products already. Retailers in these markets sell our Miyabi-brand solar lights. And we believe that, like our current customers, you'll appreciate our technology and quality.

Two to three new models monthly

We launch up to three new models each month under our own brand name. If you can't find what you're looking for, we'll design a custom item for you in as few as 60 days. Our 20 engineers each bring five years of industry experience to your projects.

Quality lights with CE certification

We spare no expense to create brighter and longer-lasting solar lights. We source high-efficiency solar cells from Japan and General Electric. All of our quality lights have CE, EMC and IP44 certification issued by KEMA, and are inspected under ISO 9001:2000-certified management. We back up our products with a one-year warranty.

Visit our booth

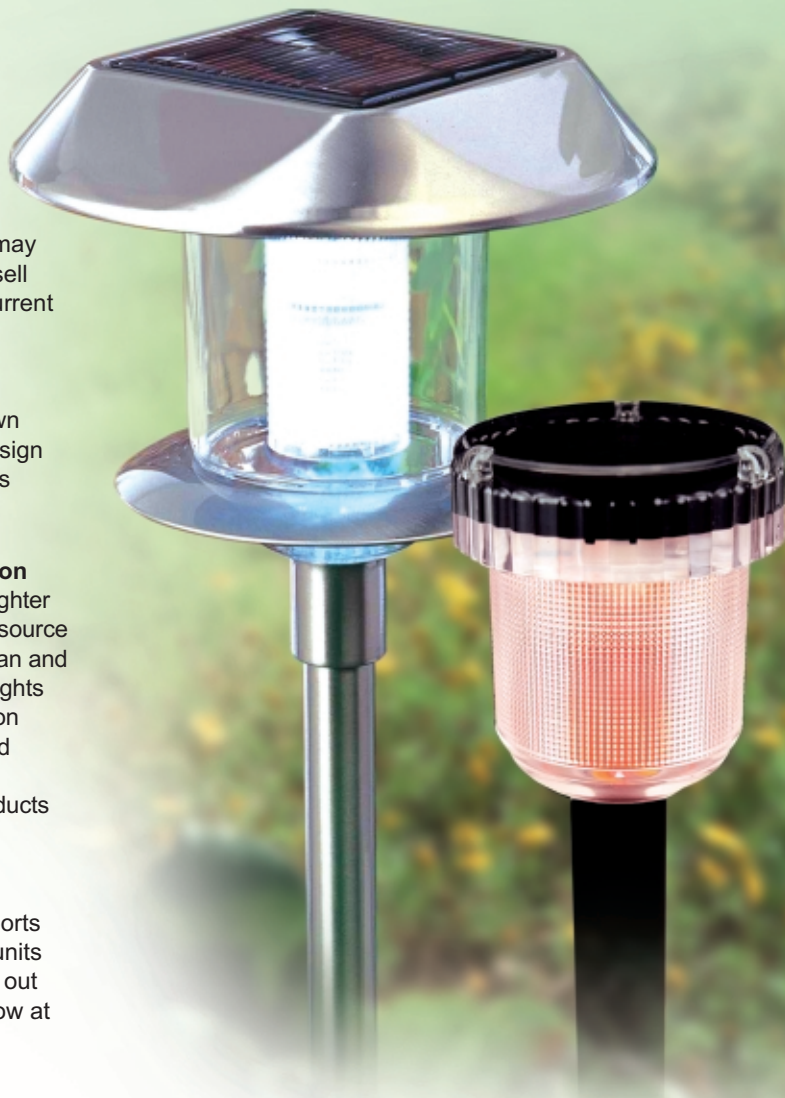

Every month, our entire group exports 1 million units, including 100,000 units from our Shanghai factory. To find out how we can supply you, visit us now at booth 3J16.
